SAWING TECHNOLOGY IS OUR PASSION

From our manufacturing facilities in Germany and the United States, we supply high-performance bandsaw blades to global markets. Tailored cutting solutions ensure the perfect fit for your applications and requirements. For more than 230 years, the ARNTZ family has been investing in supplying the cutting tool market while adapting to the new demands and challenges.

With extensive experience in diverse and demanding applications, our sales team and engineers are prepared to meet your sawing challenges. Delivering quality, consistency, and service, our production facilities ensure that every ARNTZ product exceeds expectations. Dedicated customer service and sales professionals are always ready to assist you.

We are inspired by your success.

AT YOUR SIDE WORLDWIDE

FACTS AND FIGURES

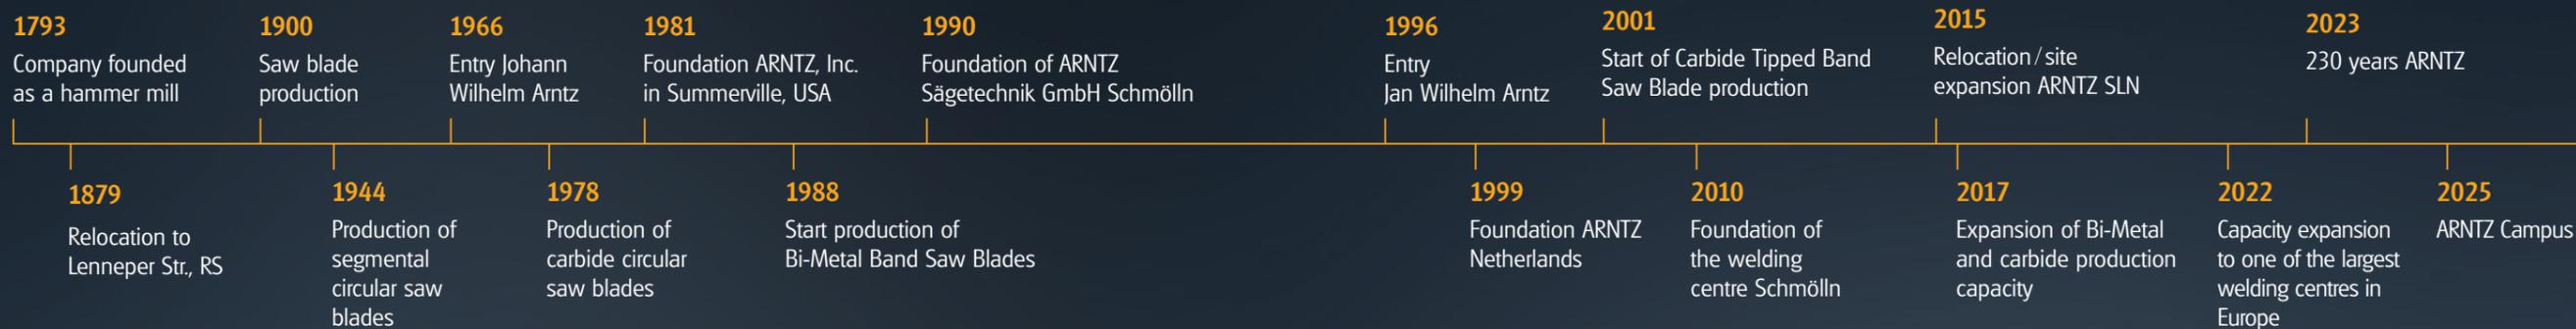

- › Established in 1793 by Johann Wilhelm Arntz
- › 7th generation ownership
- › Over 230 years of tooling production
- › Manufacturer of high-performance Band Saw Blades
- › Manufacturing locations in Germany and USA
- › Global distribution network covers 80 countries

Jan Wilhelm Arntz
CEO

Johann Wilhelm Arntz *1763 † 1834 Johann Ferdinand Arntz *1806 † 1867 Johann Wilhelm Arntz *1846 † 1908 Johann Wilhelm Arntz *1873 † 1932 Johann Wilhelm Arntz *1908 † 1957 Johann Wilhelm Arntz *1939 † 2021

PRODUCTION

Bi-Metal and Carbide Tipped Band Saw Blades

Our state-of-the-art facility is equipped with cutting-edge technology along with innovative design to optimize efficiency and precision while raising production and service standards. This ensures that every product reflects our craftsmanship, consistency as well as reliability to ensure customer satisfaction.

THE RIGHT BREAK-IN

Guarantee for extended blade life

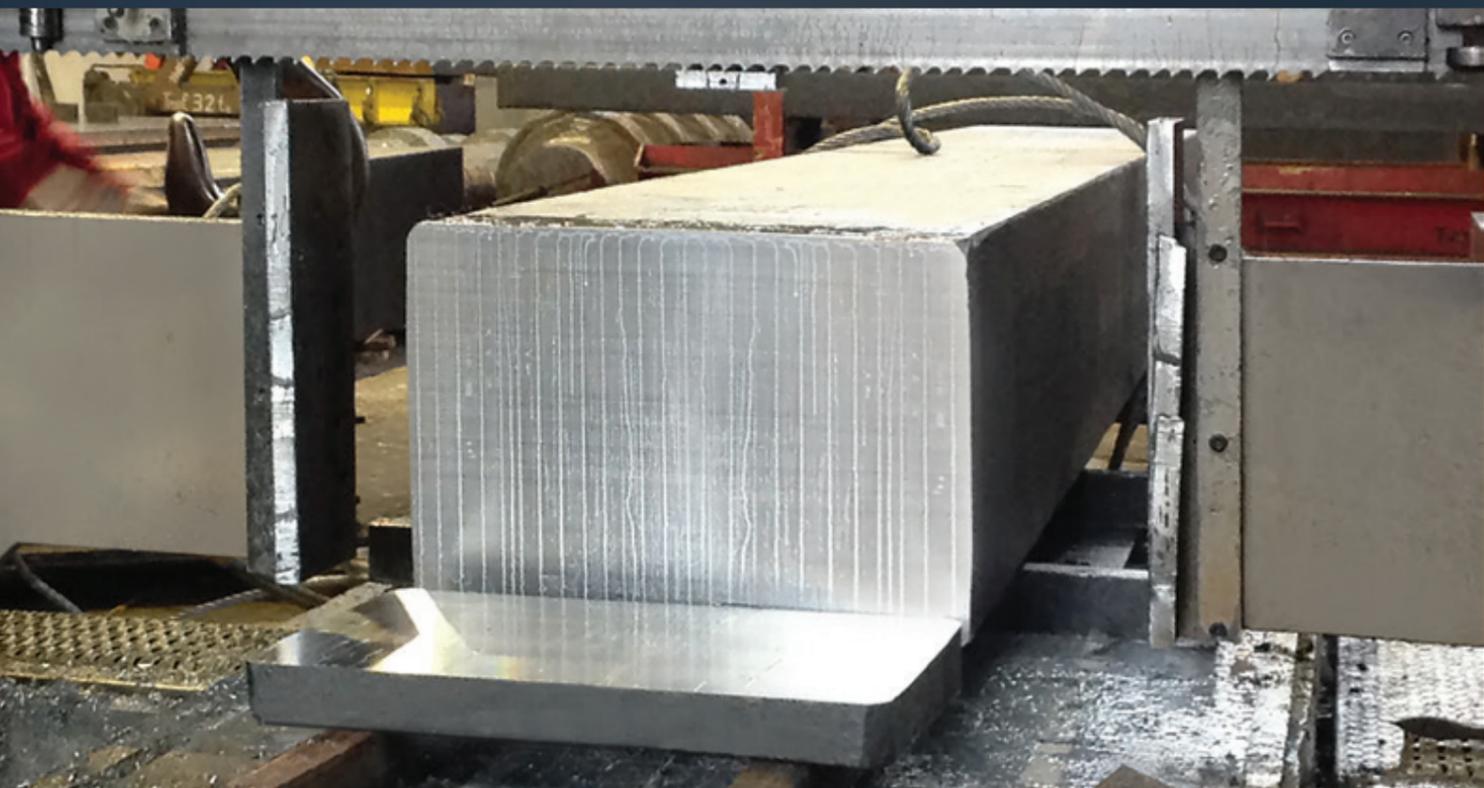

Breaking in a Band Saw Blade is essential to ensure its optimal performance and longevity. This process involves gradually acclimating the blade to tension, temperature, running the machine at slower cutting rates to ensure proper functionality before full operation.

Why is Break-in important?

- › New teeth are very sharp and fragile
- › Prevents premature tooth edge fracturing
- › Break-in improves overall blade life and cut finish

Instructions

- › Reduce band speed by 20% (if you have vibration continue to reduce)
- › Reduce feed rate by 20% to 50% depending on material machinability (Harder material requires a higher feed rate reduction)
- › Small adjustments to blade speed or feed rate may be necessary if noise or vibration occurs
- › Gradually increase feed rate until normal cutting rate are achieved

MISSION STATEMENT – THE ARNTZ 3S

SIMPLIFY

We have a complete product range that offers a competitive and concise solution to the most diverse sector needs on the market

SUPPORT

We have a dedicated, skilled and qualified team to support on-site as well as on the phone

SERVICE

We are dedicated to offer efficient and consistent service solutions to an increasingly demanding market

R-TEC

Faster, Straighter, Longer!

Second generation ramping technology with improved design capability to give custom made solutions to the most challenging applications.

Benefits

- › Increases tooth penetration without adding more machine feed pressure
- › Allows the blade to cut a wider range of dimensions
- › Precise edge radius control to reduce backer fatigue and improve blade life
- › A fully redesigned machine to support coolant and filtration systems to increase speed, keeping production costs low
- › Newly designed propriety software gives us maximum versatility in ramp design

TOOTHING GUIDELINE

Toothing recommendation for thin-walled profiles

Wall thickness in mm	Profile outer diameter in mm						
	20	40	60	80	100	120	150
2	14	14	14	14	14	14	10/14
3	14	14	14	14	10/14	10/14	8/11 8/12
4	14	14	10/14	10/14	8/11 8/12	8/11 8/12	6/10
5	14	10/14	10/14	8/11 8/12	8/11 8/12	6/10	6/10
6	14	10/14	8/11 8/12	8/11 8/12	6/10	6/10	5/7 5/8
8	14	8/11 8/12	6/10	6/10	5/7 5/8	5/7 5/8	5/7 5/8
10	-	6/10	6/10	5/7 5/8	5/7 5/8	5/7 5/8	-

Toothing recommendation for thick-walled profiles

Wall thickness in mm	Profile outer diameter in mm							
	80	100	120	150	200	300	500	750
10	-	-	-	4/6	4/6	4/6	3/4	2/3
15	4/6	4/6	4/6	4/6	4/6	3/4	2/3	2/3
20	4/6	4/6	4/6	4/6	3/4	3/4	2/3	2/3
30	4/6	4/6	4/6	3/4	3/4	2/3	2/3	2/3
50	-	-	3/4	3/4	2/3	2/3	2/3	1,4/2
80	-	-	-	-	2/3	2/3	1,4/2	1,4/2
100	-	-	-	-	-	2/3	1,4/2	1,4/2

Toothing recommendation for solid material

Cross section mm	Teeth per inch
	tpi
from 550	0,75/1,25
380 - 750	1/1,3
250 - 550	1,4/2
120 - 350	2/3
80 - 140	3/4
60 - 110	4/6
40 - 70	5/7 5/8
30 - 60	6/10
20 - 40	8/11 8/12
to 25	10/14

Quick Tips

- › The required tooth pitch depends on the wall thickness and diameter of the profiles to be cut. The tables apply to single cuts. If two or more profiles are cut next to each other, the tables apply taking into account two times the wall thickness with a single profile outer diameter
- › Always ensure at least 3 teeth are in contact with the material for clean cuts and to avoid blade binding
- › For wider material, use lower TPI to reduce strain and improve chip clearance
- › For smaller materials, use higher TPI to prevent tearing or jagged edges

BI-METAL – WHY SO SUCCESSFUL?

The backer of the Bi-Metal Band Saw Blade is made of specially alloyed spring steel. Highly flexible with a strength of approx. 50 HRC.

HARD AND RESISTANT

Tooth tips made from hardened HSS in qualities M42 and powder metallurgical M51 ensure the highest wear resistance due to an extensive heat treatment.

OPTIMALLY CONNECTED

The backer and the HSS flat wire are undetachably welded together by a special electron or laser beam welding process.

ADVANTAGES

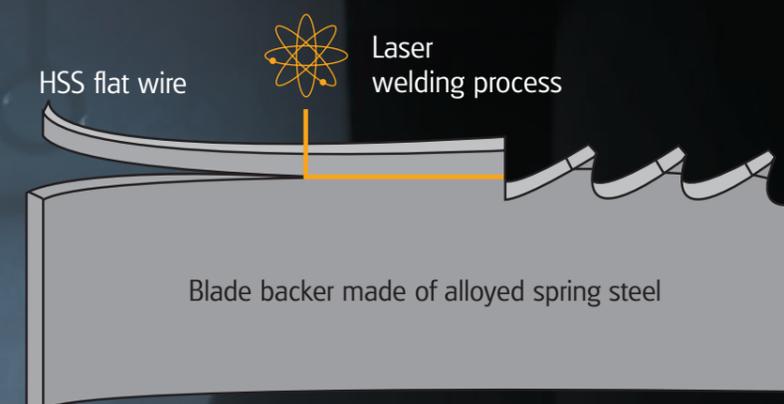

The high-quality Bi-Metal Band Saw Blade combines the flexibility of the spring steel backer with the enormous wear resistance of the high speed steel. Each tooth tip of the finished band is made of hardened HSS, extremely durable for best performance.

M42

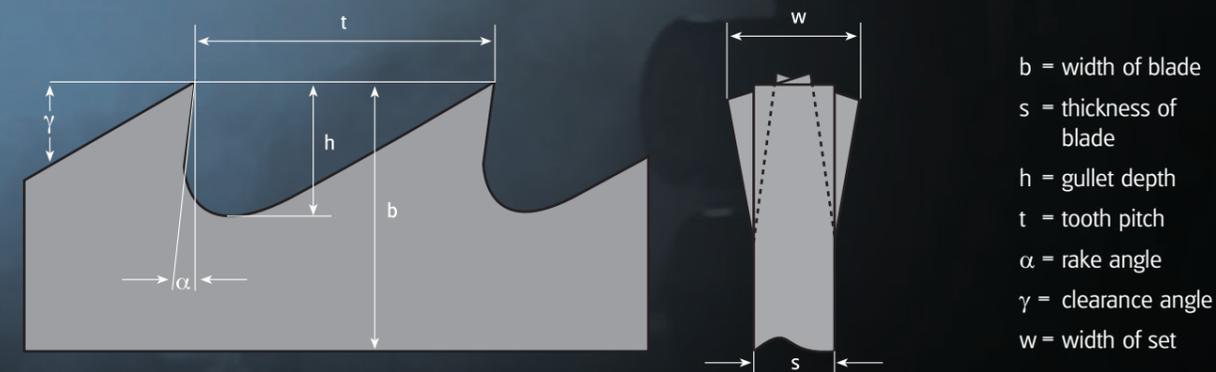

Material 1.3247
Hardness approx. 68 - 69 HRC

M51

Material 1.3207
Hardness approx. 69 HRC,
with high tungsten and cobalt
content.

CARBIDE – WHY SO SUCCESSFUL?

Our Carbide Tipped Band Saw Blades are true high-performance professionals, developed for absolutely clean and smooth results under extreme cutting conditions.

FLEXIBLE

The blade backer consists of a specially alloyed spring steel and forms the optimal foundation for high-performance cutting.

PRECISELY GROUND

The subsequent grinding processes are crucial to ensure the correct tooth geometry and excellent performance.

PERFECTLY CONNECTED

Each ARNTZ Band Saw Blade undergoes a specialized process in which the highly wear-resistant carbide teeth are securely bonded to the backing strip through welding techniques.

TARGETED

The carbide tipped tooth tips work highly efficiently and achieve up to 3 times higher cutting performance in low-vibration cuts.

PROFESSIONAL ACCESSORIES

Tension measuring device

Wrong tension of band can be the reason for crooked cuts or can cause blade breakage. Therefore, the band tension should be checked frequently. Detailed instructions explain how to select and control the right tension of the band saw blade.

Refractometer

The correct concentration of cooling liquid is important for optimum life time of ARNTZ Band Saw Blades. To check the right concentration of liquid while operating it is recommended to use the ARNTZ Refractometer.

Application toolkit

Making sure your blade runs under perfect conditions. Featuring: Tension measuring device, refractometer, tachometer, accessories and more.

HIGH-PERFORMANCE CIRCULAR SAW BLADES
for Industry and Craft

Our high-quality Circular Saw Blades are precision tools and are characterized by particularly smooth running, high cutting accuracy and a long service life. Rely on quality and efficiency for cuts that make the difference.
