

SAFETY JOGGER
WORKS

ENGINEERED IN EUROPE

HEAD-TO-TOE PROTECTION

2024

Welcome

Dear partner,

Thank you for your interest in Safety Jogger.

At the heart of our story lies **Cortina**, a family-owned company that distributes over 30 million pairs of footwear and apparel globally each year. Safety Jogger proudly operates under the wing of this internationally renowned and future-oriented organization, offering a wide range of innovative safety products.

Our journey has always been fuelled by innovation, which is also reflected in our new motto '**head-to-toe protection**'. Whether you're in need of safety footwear, overshoes, workwear, head protection or gloves, our team of experts has worked tirelessly to create a one-stop safety solution for various sectors. It is a testament to our continuous pursuit of protecting anyone, anywhere and anytime.

But our mission doesn't stop there. We've embraced a **sustainable perspective**, envisioning a future where safety not only applies to individuals but also to the planet we call home. By incorporating recycled materials into our products and embracing our social responsibility, we're committed to protecting our environment as a whole.

Yet, Safety Jogger promises more than protection. We also promise to offer a **noticeable added value to our partners**. With benefits like an always-in-stock guarantee, a robust supply chain, a focus on style, quality and comfort, and digital tools for your convenience, we're here to enhance your experience. Our powerful sponsorships and marketing support maximize our brand's visibility and boost our partner's sales.

So it might be clear that **Safety Jogger has always been more than a brand, it's a promise**. A promise to deliver the highest level of protection without compromising on innovation, durability and service. With this catalogue, we invite you to explore our commitment to providing the best safety products for industrial professionals, construction workers, healthcare providers or anyone in need of reliable safety gear.

We are excited to embark on this journey with you, as partners in safety and progress. Together, let's continue to move forward, one (safe) step at a time.

Wim Vanderschueren & Tom Gybels
Founder & Global General Director

1950

Start of a small shoe factory in Belgium, named **Cortina**

1960

Import of footwear from **Italy**, Europe

1980

One of the first European companies to start **importing from the Far East and China**

1981

Launch of the **Cortina safety footwear collection**

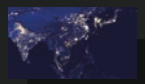

1990

Registration of the **Safety Jogger brand name in Benelux**

2000

Launch of the **Safety Jogger brand in Europe**

2007

Selling of the first pair of Safety Jogger footwear in **Asia**

2011

Development and manufacturing of the Safety Jogger **work gloves collection**

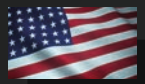

2013

Acquisition of '**Oxypas**', the n°1 brand for medical and professional footwear

2014

Launch of Safety Jogger in **Russia**

2015

Safety Jogger goes **USA**

2017

Acquisition of the leading German safety footwear brand '**Maxguard**'

2017

Traction by **Shoes for Crews**

2018

Launch of the **lightweight** and **tactical collection**

2020

Acquisition of '**Tiger Grip**', market leader in slip-resistant and safety **overshoes**

2022

Launch of **workwear** and **head protection**.

More than 70 years of experience

At Safety Jogger, we have more than 70 years of experience in developing footwear and apparel. What started as a small factory in Belgium called **Cortina** quickly grew into a global business that consists of many brands - with **Safety Jogger** being one of the main ones.

Today, we are a **leading brand of certified personal protective equipment**, with a presence in more than **130 markets**. As a multicategory brand, we develop a complete range of footwear, overshoes, workwear, head protection, gloves and accessories. This to ensure safety for all professions in **industrial**, **professional** and **tactical** industries.

Global presence

in +130 countries

Protection from head to toe

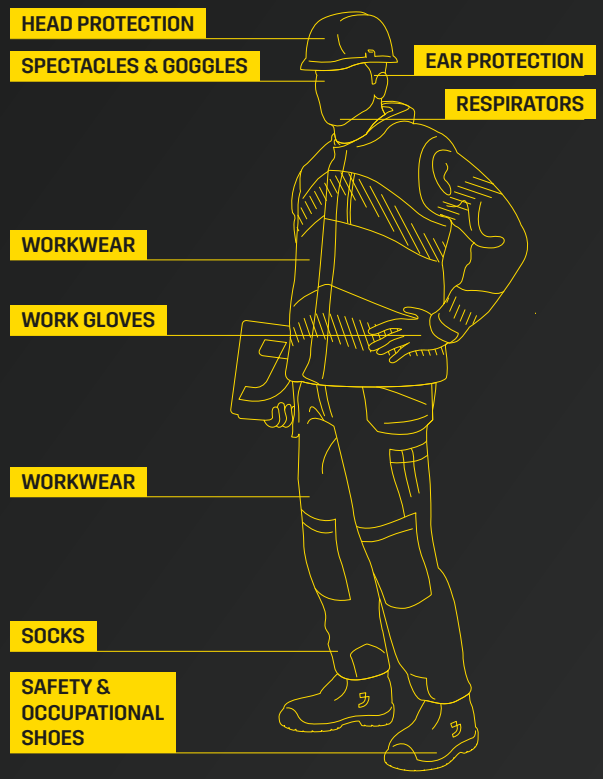

Safety Jogger WORKS.

To provide protective **solutions for anyone, anywhere and anytime**.

What started with certified safety shoes, socks and gloves has now expanded into a **complete range of personal protective equipment**. Because we want to meet every consumer's need. We want to provide total protection against work hazards. We want to offer a **one-stop solution from head to toe**.

All products are engineered in **Europe** by top specialists with in-depth product knowledge and hundreds of years of accumulated experience. We extensively **test** our products in our **own lab** to guarantee they meet the highest norms and standards.

The result? An evergreen, modern and complete collection for various industries that is qualitative yet affordable. One that protects the entire body: from our well-known **footwear**, **socks** and **gloves** to our brand-new **workwear**, **eyewear**, **head protection**, **ear protection** and **respirators**.

Vision & mission

Vision

Delivering constant innovation in PPE by utilizing advanced technology and over 70 years of development experience.

Mission

Offering head-to-toe protection for every workplace, renowned for its modern design, competitive pricing and excellent quality.

Ambition

Building the best professional PPE company in the world, with unparalleled speed to market, innovation and value creation.

Our promise towards our customers

- ✓ One-stop solution from head to toe
- ✓ Always in stock
- ✓ Immediate delivery
- ✓ Strong distribution channels
- ✓ Excellent customer support
- ✓ Online dealer platform
- ✓ Elaborate marketing support
- ✓ E-learning platform
- ✓ Worldwide availability
- ✓ Good quality at a competitive price

Global Recycled Standard

The Global Recycled Standard – better known as GRS – is an international, voluntary standard that echoes our dedication to using more recycled materials while upholding ethical and responsible production practices. A product earns this international standard when it contains at least 20% certified recycled materials. At Safety Jogger, we incorporate various **GRS-certified components** into our products, such as **recycled upper materials, outsoles, laces and linings**.

Here at Safety Jogger, we not only protect workers, but also the planet & environment they live in

WE WALK THE TALK!

Here at Safety Jogger, our commitment to sustainability is woven into the very fabric of our brand. That is why we develop PPE products that are not only safe, modern and comfortable, but also have a positive impact on the environment.

Our journey towards sustainability began with transforming 12 recycled plastic bottles into the upper material of our Morris shoe. But... we wanted more!

More recycled products

We aspire to develop even more recycled products to have less waste. That's why we proudly present our **brand-new eco footwear collection with certified recycled shoes across all price ranges**. But our dedication doesn't stop there. Did you know that a significant part of our **workwear collection** is also made from **recycled materials**? Even our **removable foam footbed is 100% recycled**!

More green energy

Reducing our carbon footprint is another crucial aspect of our mission. We actively **harness renewable energy** within our company and production processes, alleviating the pressure on our planet and contributing to a safer environment for all.

More for the next generations

We are also deeply committed to **social sustainability** and a brighter future for the generations to come. **Responsible manufacturing** and **creating optimal working conditions** are an integral part of this. Additionally, we proudly **support various green initiatives and social projects**, including WeForest and PsychoseNet.

10-12 PET bottles

Each pair of ECOMORRIS contains no less than 10-12 PET bottles worth of ocean waste and is therefore GRS certified. That way, these safety shoes not only protect your feet, but also our planet.

MATERIALS & TECHNOLOGY

Tiger Grip Technology

Thanks to their **unique rubber formulation and meticulously engineered outsole** with specific patterns, **Tiger Grip overshoes** have become the reference for **slip resistance** in demanding work environments, such as slippery kitchen floors.

Today, **we proudly extended this advanced outsole technology to our heavy-duty footwear**, catering to professions where grip, traction and stability are an absolute must. Our footwear embedded with Tiger Grip technology presents unparalleled slip resistance, durability against wear and tear and traction on different surfaces - even wet and uneven ones.

An outsole for every surface

PU

PU or polyurethane is a foamed material that is used in 2 different compositions. **Single** or **mono-density PU**, which is an outsole with uniform density. And **double-density PU** or **PU/PU,** which is a combination of a softer PU midsole and a more compact PU outsole.

Features of single-density PU:

- ✓ Good flexibility, shock absorption, abrasion and slip resistance
- ✓ Heat resistant up to +/- 120°C
- ✓ Resistant to oil and fuels, but not to strong acids
- ✓ Mainly used in light application areas

Features of PU/PU:

- ✓ Same benefits as single-density PU
- ✓ The softer PU midsole provides extra impact absorption and wearing comfort
- ✓ The compact PU outsole improves the cut resistance
- ✓ Wide range of applications, except for strong acids and extremely hot or cold conditions

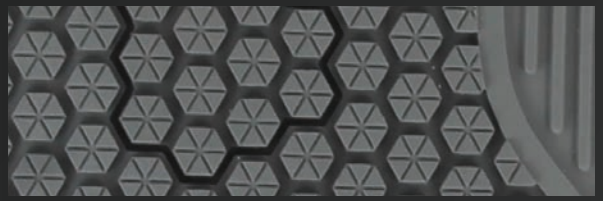

TPU

TPU or thermoplastic polyurethane is also PU, but with a higher density. It is used only for outsoles and is often translucent.

Features:

- ✓ Flexible, sturdy and resistant to abrasion
- ✓ Great slip resistance, comparable to rubber
- ✓ More durable than PU outsoles
- ✓ Better flexibility in cold conditions
- ✓ Less resistant to high temperatures

Rubber

Rubber can be used as a single-rubber outsole or in combination with a softer midsole made of PU, EVA or other materials.

Features:

- ✓ High slip and heat resistance (up to 300°C)
- ✓ Cut resistant and resistant to oil, fuel and most acids
- ✓ Very durable and long-lasting
- ✓ Less shock absorbing and abrasion resistant
- ✓ Heavier and less flexible than PU or TPU

Outsole/midsole materials

PHYLON

Phylon, or double-baked EVA (Ethylen Vinyl Acetat), is often used as midsole in a combination with rubber outsoles. The main features of this material are lightness and superior shock absorption.

However, in some areas, there are also shoes completely made from EVA. Especially clogs, suitable for light professional applications, use the features mentioned above.

PVC

PVC is mostly used in competitively priced footwear and mono-material products like rainboots. It is resistant to most chemicals and provides good abrasion resistance, but limited heat resistance.

UPPER MATERIALS

We use a **wide variety of upper materials**, depending on the area of application:

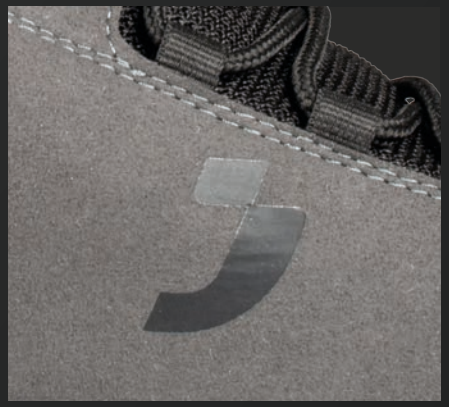

Genuine leathers

This extremely durable material primarily stems from the meat industry, where skins are mostly considered waste. Depending on the quality and price level, leather can show different surface structures such as full grain, corrected grain, PU-coated (action) leather, nubuck or split suedes.

Synthetics

This material is often used as a more commercial alternative to genuine leather, imitating its look and feel. Often, a polymer layer (e.g. PU) is added to a base layer of nonwoven or woven fibers.

Microfibers

Microfibers are synthetics as well, but with a higher quality level. They are used as a (vegan) alternative to suede/ nubuck/nappa leathers of animal origin. Microfibers show impressive performance levels in terms of abrasion, tensile strength, breathability and weight.

Textiles

Textiles, whether woven or knitted and based on natural or synthetic fibers, are increasingly integrated into footwear. Textiles are suitable for all kinds of applications, as a wide variety of properties can be achieved by finishing or blending the individual fibers with other materials. Today, the number of fibers recycled from pre- or post-consumer waste has significantly increased.

PUNCTURE-RESISTANT MIDSOLE MATERIALS

An **anti-penetration midsole protects the shoes and feet against the penetration of sharp objects** such as nails, screws, and glass. It's embedded between the footbed and outsole of puncture-resistant footwear.

Footwear certified to EN ISO 20345 or EN ISO 20347 and marked with code S1P, S3, S7, S5, O3 or O5, has an anti-penetration midsole.

Steel

- The most traditional choice. Thin and budget friendly, but not flexible.
- Made from coated steel or stainless steel
- Not metal free
- Conducts heat, cold and electricity
- Additional marking P

Nonwoven

- A flexible material. Thinner than anti-puncture textile.
- Made from non-metallic fibers
- Metal free
- Does not conduct heat or cold
- Additional marking PL or PS

Anti-puncture textile

- The lightest and most flexible material, but more expensive than steel and nonwoven midsoles.
- Made from aramid fibers
- Metal free
- Does not conduct cold, heat and electricity
- Additional marking PL or PS

TOE CAPS

A protective toe cap made according to the European or ASTM standard will protect feet **from impact and compression injury**, regardless of the material.

But what exactly is the difference between the materials and what could be the best choice for you?

Toe caps, protection from the inside out

Steel toe cap

- Made from **steel only**
- Most **traditional choice**
- **Naturally stronger** than all other materials, resulting in a thinner layer that offers more space around your toes
- **Cheaper** compared to composite toe caps
- **Protects** your toes from basically every impact & compression injury
- **Conducts** cold, heat and electricity

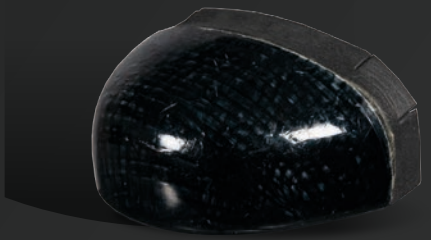

Composite toe cap

- Made from **non-metal materials** such as fiberglass, carbon fibre
- **Up to 30% lighter than steel toe caps**, reducing stress and fatigue in legs
- **Does not conduct** heat or cold in extreme temperatures, ensuring extra comfort
- **Metal free**, thus practical for electrical hazardous environments or workplaces with metal detectors

Aluminium toe cap

- Also known as **alloy toes**
- Made from **lightweight materials** (30-50% lighter than steel)
- **Not metal free**

Nanocarbon toe cap

- Made from an innovative **carbon nanofiber material**
- **Lightest** (50% lighter than steel and 40% lighter than composite) and **most advanced** safety toe cap
- **Thinner** and therefore a solution for the bulkier composite toe
- **Does not conduct** heat or cold
- Metal-free, non-magnetic and antistatic material

BAMBOO SOCK

Even the best shoes won't deliver on their promised comfort if you don't wear the right socks

We all sweat – it's a natural response to physical and emotional exertion. Sweating helps our bodies cool down, but can also lead to discomfort, especially when wearing shoes.

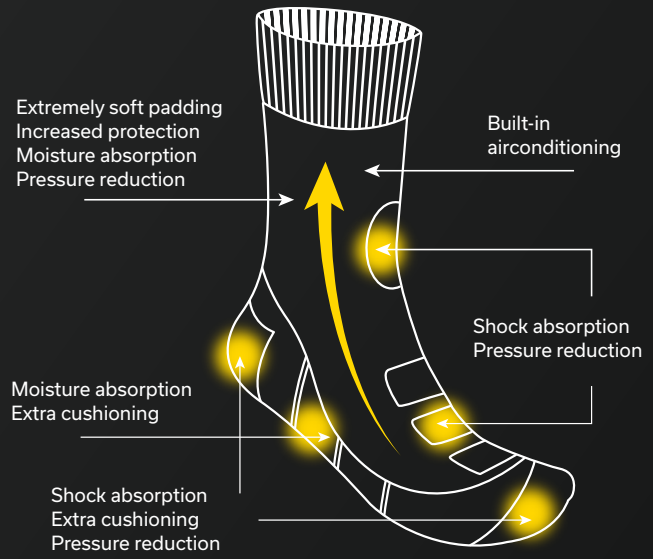

Why is this? Because the distribution of sweat glands in our skin determines how much sweat is produced in different areas of our body, with the highest density found at the feet. So if you've ever complained about "heavy sweating" or "warm and wet feet" while wearing shoes, you're not alone.

Wet, sweaty feet aren't just uncomfortable, they can also lead to skin problems. Damp skin swells, making it more prone to blisters, athlete's foot, and other issues. Shoe manufacturers are always working on making shoes more breathable, but there's one often-overlooked piece of the puzzle: the sock.

Enter the Safety Jogger Bamboo Sock, a meticulously crafted solution designed to combat the downsides of sweat production on your feet!

Engineered with different functional zones to deliver high-tech comfort:

BAMBOO SOCK

Here’s how our bamboo sock has been thought through down to the last detail:

Benefits of the bamboo material:

Eco friendly

A fast-growing raw material – bamboo can grow 4 feet per day - that is biodegradable and requires far less water and pesticides compared to cotton.

Extra moisture absorbent

Bamboo absorbs a lot of moisture and avoids wet feet.

Antibacterial

Natural odour-inhibiting components counteract unpleasant sweat odours.

Thermoregulating

Bamboo has a cooling effect in warm temperatures while keeping you warm in colder temperatures.

Soft and hypoallergenic

An incredible soft solution for those with a sensitive skin.

Benefits of the design:

A perfect fit

Designed with special attention for the left and right foot.

Elastane content

Provides light compression and reduces foot swelling during long workdays.

Terry cloth structure

Significantly increases moisture absorption, ensuring a dry feel for longer periods.

Dense terry cloth structure at the tip

Helps alleviate pressure points and discomfort for those wearing safety shoes with toe caps.

Terry loops

Act like cushions, reducing pressure while standing or walking.

Raised heel area

Designed to reduce friction and pressure points.

Damping cushion

Strategically placed at the instep, alleviating pressure from tightly laced shoes.

Very open and thinly knitted design

Allows warm, humid air to escape from the foot, maximizing breathability.

WORLDWIDE CERTIFICATES

No safety shoe without the right certifications

We are present worldwide and deliver certified products that meet global safety standards.

No matter what country you live in.
No matter which safety product you are interested in.
We provide the right certifications for your region!

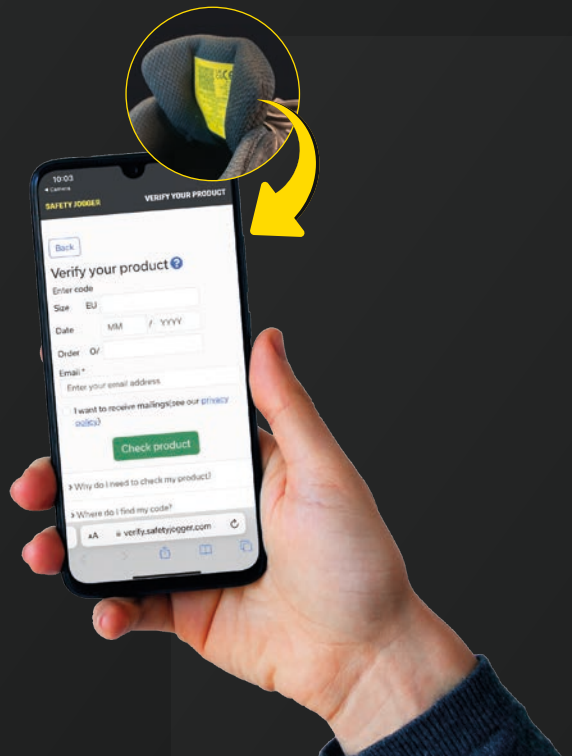

Safety Jogger's safety footwear is certified in accordance with the global standard for safety footwear.

Need a specific certificate for your area that we don't have yet? Let us know and we'll make it happen!

Our certification label explained

- QR code to verify product authenticity
- Order number / Product reference
- CE and UKCA marking, indicating compliance with the highest safety, health and environmental protection requirements
- Size
- Manufacturing date
- Standard and obtained protection category
- Additional standards and their protection categories
- Manufacturer and address
- Country of production
- Material composition of the upper, lining and outsole

QUALITY IS KEY

By developing in our own facilities and inspecting all materials in our specialized test laboratory, we can monitor every aspect of our products. From design and construction to the final distribution. This way, all products are manufactured according to Safety Jogger's quality standards.

As a result, we are certified by the most known institutes in the industry and can guarantee our products meet the highest norms when it comes to protection.

Innovation in every step:

- ✓ Specialized **test lab**
- ✓ Advanced **R&D facilities** in Europe and Asia
- ✓ Experienced **footwear professionals**
- ✓ Use of the latest **footwear technology**
- ✓ **Certified** worldwide
- ✓ Modern **on-site sample room**
- ✓ State-of-the-art **machinery**
- ✓ Continuous **investments** in innovation and development

CERTIFIED ORTHOPEDIC SOLUTIONS

How does it work?

1 - The customer **receives a Safety Jogger shoe** that is suitable for orthopedic footbed and alterations.

2 - The customer goes to the **foot specialist**.

3 - The foot specialist is **registered** at the Neskrid platform or easily **creates an account** via neskrid.com.

4 - The foot specialist **analyses the feet, takes measurements and forwards the data** to Neskrid.

5 - Neskrid **produces** according to these measurements and current regulations.

6 - The foot specialist **receives the soles** and **organizes the check-up and delivery.**

The custom-designed footbed will have the **same properties and certifications** as the replaced footbed, assuring that your safety shoe still meets all requirements.

SINCE 1924 NESKRID

Are you in need of an orthopedic footbeds? In the case of safety footwear, this can be a bit tricky. To comply with all safety regulations, the footbed also needs to be certified by us, in accordance with a particular model. This means that you cannot simply replace it with any other (certified) footbed.

That's why we offer a brand-new solution that answers to the **customer's individual needs**: NESKRID.

Neskrid is a Dutch supplier specialized in certified orthopedic soles for safety footwear. All solutions are developed through a unique combination of expertise in orthopedics and professional footwear, which means that they are adjusted to the individual foot while still meeting the official regulations.

Worldwide service

Neskrid offers full service on a global level. No matter where you are located, having a Neskrid account will give you access to all solutions.

DGUV 112-191

Approved by DGUV

With customized orthopaedic footbeds from Neskrid in your Safety Jogger shoes, you are always compliant with DGUV 112-191 (the German Social Accident Insurance).

SJ3FIT

A comfortable pair of shoes isn't just about choosing the right size – **a correct width is also essential for a perfect fit**. Take, for instance, the interplay between outsole thickness and width. Shoes with a thicker outsole tend to have a narrower width, whereas those with a thinner outsole offer a wider width.

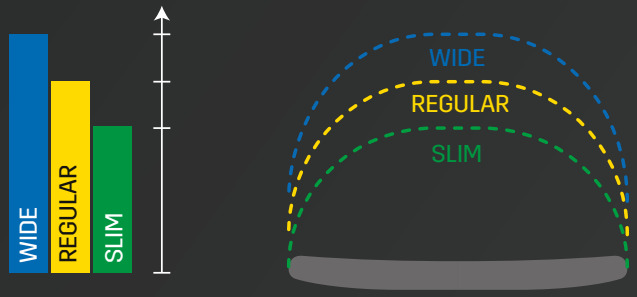

Thanks to our groundbreaking **SJ3FIT insole**, you can enlarge or reduce the circumference of the shoe's front part by replacing the regular footbed with the **wide or slim fit version**. That way, our SJ3fit insole allows you to **easily adapt the width of your Safety Jogger footwear to your individual needs**.

Choose your fit

Products certified for SJ3fit are marked with this icon:

3FIT SYSTEM®

Outstanding comfort, support and performance with every step

Our removable Safety Jogger foam footbed is included in most of our footwear.

No matter how many hours on the job, how many steps a day or how uneven the surface is that you are walking on: our foam footbeds put an end to aching and uncomfortable feet at the end of your working day.

The SJ foam footbed ensures:

- All-day **comfort**
- A **lightweight** design
- Enhanced **breathability** to keep feet cool
- Moisture absorption to keep feet **dry**
- **Arch support** to ensure extra comfort throughout the day
- **Optimum shock absorption** in heel and forefoot to prevent fatigue
- An extra layer of **cushioning**
- **Conductivity** of electrostatic discharge (ESD) standards
- **Antibacterial** characteristics to remove odor

uses GRS certified materials

Global Recycled Standard

PPE FOR EVERYONE

At Safety Jogger, our mission is to provide personal protective equipment that truly serves everyone. However, we understand that in the world of safety gear, a one-size-fits-all approach simply doesn't cut it. That's why we've gone the extra mile to ensure that our products are not only safe but also comfortable, meticulously designed to meet the distinct anatomical requirements of each gender.

Custom lasts for shoes

There are no identical two human feet on this planet, and this perfectly sums up the complex nature of our industry. Just as there are no two identical feet, there are no universally fitting shoes. Acknowledging the significant differences in the anatomy of men and women, Safety Jogger has developed a wide range of custom lasts tailored specifically to all genders. Even when the design of a shoe is identical, our focus on fitting and proportions ensures that each product adheres to the anatomical requirements of our male and female customers.

Workwear designed for women

Our commitment to delivering products that prioritize both safety and comfort extends to our workwear collections as well. To provide the perfect fit for women, we very deliberately decided to produce each product in both men's and women's sizes.
The workwear collection for women is meticulously adapted to their natural body shape, allowing them to move comfortably throughout their workday. Additionally, our feminine sizes also come in a refreshing array of colours.

TECHNICAL FEATURES

Toe protection

Toe cap that protects your feet from impact & compression injuries

Slip resistance

Safety shoes are all required to be slip resistant (tested on a ceramic floor with a soap solution), but are marked SR if they pass the slip-resistance test on a ceramic floor with an oily solution (glycerin)

Antistatic

Prevents a build-up of static energy in your body by diverting it into the ground, preventing any unwanted sparks that could start a fire

Heel energy absorption

Reduces the impact of jumping and running on the body by absorbing shocks and returning energy

Closed heel

Provides your feet with extra support and protection

Water penetration and absorption

The upper of the shoes is water-resistant.

Waterproof

For shoes that are completely waterproof thanks to a membrane.

Puncture resistance

The midsole protects the shoes and feet against the penetration of sharp objects such as nails, screws, and glass

Cleated outsole

Protrusions on the sole of the shoe provide additional traction on a soft or slippery surface

THE NEW STANDARD FOR SAFETY FOOTWEAR EXPLAINED - EN ISO 20345:2022

Standards for PPE products are regularly reviewed and adapted when necessary. This is also the case for EN ISO 20345. Until June 2022, the 2011 version of the standard was in place. From then on, the updated 2022 standard came into effect.

Certificates do not expire when a standard is updated. This means the certificates of all shoes certified to EN ISO 20345:2011 remain valid until their expiration date (which is 5 years from the date of issue).

UPDATE WPA	Water penetration and absorption
WR	Waterproof
E	Heel energy absorption
FO	Oil & fuel resistance

Electrostatic discharge (EN 61340)

Electrical hazard (ASTM F2413)

Did you know...

that the EN ISO 20345 standard has changed since 2022?

Slip resistance

EN ISO 20345:2011

Slip resistance had three different ratings: SRA, SRB and SRC.

- SRA outsoles were tested on a ceramic floor wetted with a soap solution.
- SRB outsoles were tested on a steel surface wetted with an oily solution (glycerin).
- SRC outsoles passed both the SRA + SRB test.

EN ISO 20345:2022

The slip-resistance test on a ceramic floor with a soap solution is from now on a **basic requirement** for all safety shoes, so no marking will be added. An extra slip-resistant test on a ceramic floor with glycerin (an oily solution) can be carried out as an **additional requirement** and will be marked **SR**.

Puncture resistance

EN ISO 20345:2011

P was marking puncture resistance.

EN ISO 20345:2022

The P marking is now used only for metallic midsoles. Shoes with non-metallic midsoles (fabric or nonwoven midsoles) are now marked PL or L / PS or S, depending on the type of nail.

- ✓ PL or L = puncture test passed with a nail of 4,5mm
- ✓ PS or S = puncture test passed with a nail of 3mm

Fuel & oil resistance

This is no longer a mandatory requirement. If the outsole is fuel & oil resistant, it is marked FO.

New categories

New S6 & S7 categories: to identify safety shoes that are completely waterproof thanks to a **membrane**.

- ✓ The S6 label corresponds to an S2 WR shoe.
- ✓ The S7 label corresponds to an S3 WR shoe.

WRU becomes WPA

Shoes with a **water-resistant** upper are now marked as WPA. WPA refers to the water penetration and absorption tests that are performed to determine the water resistance of the upper.

New additional features

- ✓ SC: abrasion resistance of the **scuff cap**.
- ✓ LG: adequate **grip** on a **ladder**.

HEAD-TO-TOE PROTECTION

SAFETY JOGGER
INDUSTRIAL

INDUSTRIAL

Safety Jogger Industrial offers a wide selection of safety footwear that covers the specific needs of industrial environments, such as the logistics, automotive & construction industry. This certified range combines trendy designs and all-day comfort with all the safety features needed to protect against hazards and injuries. Keeping all workers safe on the job.

LIGHT
APPLICATION

Light application footwear is engineered for dry environments. Wearers of this type of footwear typically work indoors, on relatively even floors. Examples of light application industries are logistics, assembly or even catering.

MEDIUM
APPLICATION

Medium application footwear is engineered for both wet and dry environments with more robust requirements. People wearing this type of footwear usually have to carry out tougher jobs or kneeling activities. These shoes and boots can be used both indoors and outdoors and are therefore more all-round, but less fit for extreme circumstances. Examples of medium application industries are light construction, oils and gas industry or utility.

HEAVY
APPLICATION

Heavy application footwear is engineered for dirty, muddy and rocky environments. People wearing this type of footwear mostly work outdoors and have to walk on uneven surfaces that demand high stability and protection of their feet. Examples of heavy application industries are road construction, building construction, or even mining.

EH (ELECTRICAL HAZARD)

EH footwear has such a high electrical resistance that it creates a solid barrier between you and the ground and does not allow electrical current to travel through the body. As it is fully isolating, EH footwear protects from harmful electrical current and is the ideal solution for environments with a high risk of electrocution.

AHX (EXTENDED ANTI HYDROLOSIS) POLYURETHANE

The outsoles of this footwear are made with AHX (extended Anti Hydrolosis) Polyurethane, a sustainable material that features anti-hydrolysis technology. Hydrolysis is the crumbling of the PU sole after a few years and is accelerated by warmth and humidity. AHX Polyurethane makes the sole stronger, increases the resistance against hydrolysis and is particularly useful in tropical climates, as it doesn't let heat affect its performance.

SHOES FOR CREWS

These safety shoes have been upgraded with high-performance traction by Shoes for Crews, an industry leader in revolutionary anti-slip soles. Working together with Shoes for Crews enables us to manufacture the best of both worlds in a safety shoe and elevate the performance of our slip-resistant footwear.

Benefits of the TLS closing

- Fast, effective and **time efficient**
- Easy to close with **one hand**
- **Uniform pressure** distribution
- Easy **adjustable** for a **precision fit**
- Retains tension
- Prevents from tripping and entanglement
- Extremely **strong**, **durable** and **hard wearing**

Safety with a twist

How it works

Press in the dial

Turn clockwise to tighten

Pull up for quick release

TLS (TWIST LOCK SYSTEM)

Goodbye traditional laces that require two-handed operation. Hello Twist Lock System! With Safety Jogger's TLS closure, you simply need to twist and lock for a faster, safer and easier precision fit. This innovative closure allows you to quickly tighten and loosen your footwear with one hand and in all conditions, even when wearing safety gloves.

Don't lose time tightening your laces.
Just twist and lock!

WORKWEAR

Here at Safety Jogger, our workwear just works...

Safety Jogger workwear equals both tough and good-looking garments, adaptable to the individual needs of each professional.

We continuously roll up our sleeves to provide workwear that works for everyone, whether you're on or off duty. Workwear that combines high-quality fabrics with extremely durable materials. Workwear that is comfortable and a pleasure to wear in all kinds of settings. Workwear that combines multiple functional features with a noticeable modern look.

Or in other words:

garments that will fit each professional, each activity and each environment like a glove.

... on protection

Our workwear meets several norms and standards:

EN ISO 20471
High-visibility workwear

Makes the wearer visible from all directions at day, dusk and night. This protective clothing is required by law for anyone working on roads and construction sites. High-visibility workwear is categorized into three different classes that describe how well the product can make the user visible.

	Class 1	Class 2	Class 3
Fluorescent material	0,14 m^2	0,50 m^2	0,80 m^2
Reflective material	0,10 m^2	0,13 m^2	0,20 m^2

EN 14058
Insulated workwear

Protects the wearer from cold environments, characterized by temperatures > -5 °C.

EN 343
Waterproof workwear

Protects against rain, snow, fog and ground moisture. The material and seams are tested for resistance to water penetration and vapor.

EN 14404
Workwear with knee protectors

Protects worker's knees when working in a kneeling position. The kneepads are tested for shock absorption, pressure distribution, resistance to sharp or pointed objects and various other requirements.

... on comfort

From 2-way to 4-way stretch

Comfort, flexibility and freedom of movement. the key features of all our work garments. That's why even in our **basic models**, we use **stretch materials** for supreme comfort. Our **more advanced models**, in turn, have 4-way stretch in key areas. **4-way stretch** is stretchable in all directions and recovers both width and lengthwise, moving with your body and providing an unbeatable level of performance.

Wearing comfort that goes beyond a good fit

In addition to stretch fabrics, the design and material choices of our garments also contribute to the high level of comfort:

- ✓ Comfortable and soft materials
- ✓ Breathable zones in strategic places
- ✓ Lightweight fabrics that do not weigh you down
- ✓ Excellent wicking and drying performance in smart spots
- ✓ Strategically placed pockets and accessories that do not hinder

Softshell: a jacket essential

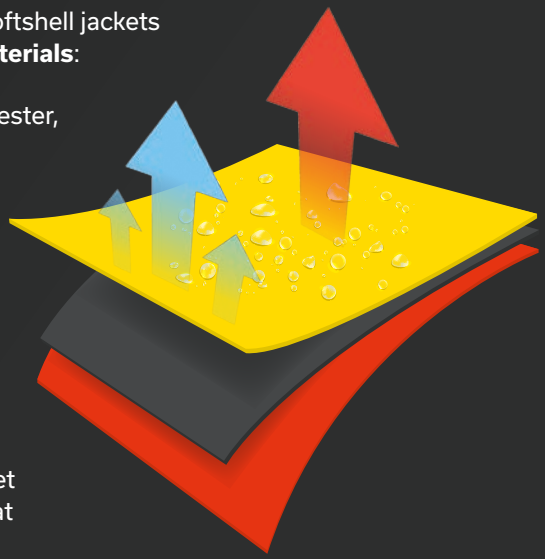

Need to maintain an ideal body temperature while being protected from the cold, wind and rain? Softshell holds the answer!

Softshell indicates a **category of technical fabrics that ensure maximum comfort in changing weather** and are particularly suitable for **physical outdoor activities**.

Why? Because generally, the more waterproof a garment is, the less breathable. Also more moisture will get trapped inside. Softshell is created specifically to **facilitate the release of moisture and regulate body temperature.**

To guarantee excellent performance, softshell jackets consist of **three layers of different materials**:

- ✓ **Outer layer** in **water-repellent** polyester, offering protection against bad weather
- ✓ **Middle layer** in a **breathable membrane**, allowing moisture to escape
- ✓ **Inner layer** made of **microfleece**, ensuring good thermal insulation

By connecting these three layers, we get a very light, elastic and soft material that provides numerous benefits:

- ✓ Flexible
- ✓ Breathable
- ✓ Insulating
- ✓ Water repellent
- ✓ Wind resistant

HEAD PROTECTION

Don’t give hazards a head start

Head-to-toe protection? We take that quite literally!

Alongside our safety footwear and workwear, we also offer **head protection for every workplace**.

Our range includes:

- ✓ **Helmets** to protect the head from falling objects
- ✓ **Safety glasses** and **goggles** to protect the eyes from particles, chemicals and high-energy light
- ✓ **Earmuffs** and **plugs** to protect the hearing from damaging noises
- ✓ **Respirators** to protect from harmful solid and liquid particles.

Important numbers when choosing ear protection

What is considered excessive noise?

Sound is measured in decibels (dB). But what decibel levels are safe and which sounds can damage the ear?

- ✔ <70 dB: safe sounds that typically don't cause any hearing damage
- ✔ >70 dB: sounds that may damage your hearing after a certain amount of time
- ✔ >120 dB: sounds that cause immediate harm to your ears

Ear protection standards

Ear protection has an SNR rating. SNR stands for single number rating and gives you an estimate of the level of noise reduction that earmuffs or plugs can provide. This means that if you are at a rock concert with a noise level of 100 dB and you are, for example, wearing our Arusha ear plugs with an SNR of 38 dB, your new level of noise exposure is 62 dB.

Important numbers when choosing eyewear

Optical filter & UV radiance

When choosing protective eyewear, you'll notice that the optical filter has a certain rating. For example: 2-1,2. But what does this mean?

The first number describes the type of filter:

- ✔ 2 & 3: UV filters
- ✔ 4: heat radiation filter
- ✔ 5: sun protection filter
- ✔ 6: infrared radiation filter

The second number describes the light transmission:

- ✔ 1.2: clear lens that transmits between 74,4% and 100% of visible light
- ✔ 2.2: dark lens that transmits between 29,1% and 17,8% of visible light
- ✔ The higher the number, the lower the transmission

An optical filter of 2-1.2 is a clear lens that offers UV protection. An optical filter of 5-2.5 is a dark lens that offers sun protection.

Impact resistance

Impact resistance is always tested with a steel ball of 6 mm diameter and a weight of 0,86 grams. When a lens has an **F marking**, the steel ball is fired at **45 m/s** or a speed of 162 km/h. When a lens has a **B marking**, the steel ball is fired at **120 m/s** or a speed of 432 km/h.

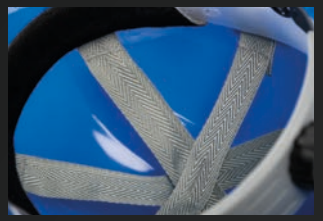

5 key features of Safety Jogger helmets

At Safety Jogger, we offer a wide variety of helmets that meet industry standards and regulations, each tailored to meet specific workplace needs. Let's explore the key features that set our helmets apart and make them the go-to choice for head protection.

Lightweight design

Our helmets are crafted with a lightweight design, prioritizing comfort without compromising safety. Workers can wear them for extended periods without any discomfort or strain. Plus, the lightweight design also makes them perfect for use as a visitor helmet.

Wheel ratchet system

We understand that a secure and personalized fit is crucial, which is why some of our helmets feature a convenient wheel ratchet system. With a simple adjustment, workers can ensure their helmets fit snugly and provide optimal stability and protection.

Chin strap

Dynamic work environments demand helmets that stay in place, no matter what. That's why certain models in our range come with a reliable chin strap. It ensures the helmet remains securely fastened during vigorous activities, strong winds or vibrations.

Ventilation

Comfort is key, particularly in physically demanding or hot work environments. Our helmets also offer good ventilation, facilitating airflow and keeping workers cool by reducing the buildup of heat and perspiration.

6-point harness system

To maximize protection, we've equipped some models with a 6-point harness system. This innovative feature ensures a secure and stable fit and evenly distributes the force of impact across the head, minimizing the risk of injury.

YEL

KANHA LIGHT

EU CN

EN 397:2012+A1:2012

Light helmet that offers all-day protection and wearing comfort

The Kahna Light helmet offers all-day **head protection** in industrial environments and provides remarkable **wearing comfort** thanks to its **low weight**. This also makes it a perfect **visitor helmet**. With the **wheel ratchet** at the back, you can easily adjust the helmet's fit to your preferences.

- 4-point textile harness for extra weight reduction
- Rib design that offers more head clearance
- Wheel ratchet for easy adjustability
- Shell made of HDPE
- Weight of 357g

Standard EN 388:2016

Gloves protecting from mechanical risks

This standard applies to all kinds of protective gloves in terms of physical and mechanical hazards caused by abrasion, blade cuts, puncturing and tearing. The level of protection against mechanical hazards is expressed by an icon followed by four numbers (performance levels), each representing the performance against a specific hazard.

The EN 388, similar to ANSI/ISEA 105, is the European standard used to evaluate mechanical risks for hand protection. Gloves with a EN 388 rating are third-party tested, and rated for abrasion, cut, tear, and puncture resistance.

EN388:2016	0	1	2	3	4	5
a. Abrasion resistance (cycles)	<100	100	500	2000	8000	-
b. Cut resistance (factor)	<1.2	1.2	2.5	5.0	10.0	20.0
c. Tear resistance (newton)	<10	10	25	50	75	-
d. Puncture resistance (newton)	<20	20	60	100	150	-

EN ISO 13997 (TDM-100 test)	A	B	C	D	E	F
e. Straight blade cut resistance (newton)	2	5	10	15	22	30

SAFETY JOGGER
PROFESSIONAL

PROFESSIONAL

Safety Jogger Professional is the number one solution for certified professional footwear. We offer a full range of trendy, comfortable and quality work shoes and clogs, adapted to the needs of workers in medical, uniform & catering environments.

LIGHT
APPLICATION

Light application footwear is mainly used on even and dry floors with a limited risk of contact with liquids.

MEDIUM
APPLICATION

Medium application footwear is engineered for dry and wet floors in an indoor environment.

HEAVY
APPLICATION

For our professional collection, heavy application means that this type of footwear has special features and can be worn in special areas. More specifically, these shoes and clogs meet special cleaning needs, such as being machine washable or autoclavable.

The new standard for occupational footwear explained - EN ISO 20347:2022

Standards for PPE products are regularly reviewed and adapted when necessary. This is also the case for EN ISO 20347. Until April 2022, the 2012 version of the standard was in place. From then on, the updated 2022 standard came into effect.

Certificates do not expire when a standard is updated. This means the certificates of all shoes certified to EN ISO 20347:2012 remain valid until their expiration date (which is 5 years from the date of issue).

E	Heel energy absorption
FO	Oil & fuel resistance

Electrostatic discharge (EN 61340)

Electrical hazard (ASTM F2413)

Did you know...

that the EN ISO 20347 standard has changed since 2022?

Slip resistance

EN ISO 20347:2012

Slip resistance had three different ratings: SRA, SRB and SRC.

- SRA outsoles were tested on a ceramic floor wetted with a soap solution.
- SRB outsoles were tested on a steel surface wetted with an oily solution (glycerin).
- SRC outsoles passed both the SRA + SRB test.

EN ISO 20347:2022

The slip-resistance test on a ceramic floor with a soap solution is from now on a **basic requirement** for all occupational shoes, so no marking will be added. An extra slip-resistant test on a ceramic floor with glycerin (an oily solution) can be carried out as an **additional requirement** and will be marked **SR**.

Puncture resistance

EN ISO 20347:2012

P was marking puncture resistance.

EN ISO 20347:2022

The P marking is now used only for metallic midsoles. Shoes with non-metallic midsoles (fabric or nonwoven midsoles) are now marked PL or L / PS or S, depending on the type of nail.

- ✓ PL or L = puncture test passed with a nail of 4,5mm
- ✓ PS or S = puncture test passed with a nail of 3mm

Fuel & oil resistance

This is no longer a mandatory requirement. If the outsole is fuel & oil resistant, it is marked FO.

New categories

New O6 & O7 categories: to identify occupational shoes that are completely waterproof thanks to a **membrane**.

- ✓ The O6 label corresponds to an O2 WR shoe.
- ✓ The O7 label corresponds to an O3 WR shoe.

WRU becomes WPA

Shoes with a **water-resistant** upper are now marked as WPA. WPA refers to the water penetration and absorption tests that are performed to determine the water resistance of the upper.

New additional features

- ✓ SC: abrasion resistance of the **scuff cap**.
- ✓ LG: adequate **grip** on a **ladder**.

BLU

PHARMAMASK

Disposable sterile surgical mask

Pharmamask is a disposable sterile surgical mask, CE certified.
This product is suitable for use in a general medical environment. It is composed out of three materials: a non- woven fabric, a nose strip and an elastic band. The face mask is divided into an inner, middle and outer polypropylene fiber meltblown fabric. The nose strip is made of a galvanized metal strip.

- Adjustable nose bridge
- Comfortable & breathable
- Special 3-ply non-woven design

CE EN14683-2019 TYPE IIR BFE ≥98%

Branding & visibility

Did you know that we established various **partnerships** to boost our brand's visibility all over the world?

These partnerships will drive our joint business by:

- ✓ **Increasing our media exposure**
- ✓ **Reaching a wider demographic and targeting new audiences**
- ✓ **Keeping our brand top of mind and building even more credibility**
- ✓ **Generating more brand visibility in-store (POS materials)**
- ✓ **Creating opportunities for dealer incentives (sponsorship events)**
- ✓ **Driving excitement, traffic and consequently sales**
- ✓ **...**

Ypres Rally

Safety and speed go hand in hand and so do Safety Jogger and the Ypres Rally! Three days of competition on specialist roads combined with an incredible atmosphere and famous rally pilots make Ypres Rally one of the most challenging and entertaining rallies in the world.

City Mountainbike

For several years, we have been the official partner of City Mountainbike, the organizer of the UCI Mountain Bike Eliminator World Cup and World Championships. City Mountainbike is a spectacular format that brings mountain biking to the heart of major cities on different continents.

Widzew Łódź Academy

Safety Jogger entered a strategic sponsorship with the Widzew Łódź Academy for the 2023/24 season. As part of this partnership, the Safety Jogger logo will proudly decorate the center of the youth team shirts, demonstrating our commitment to nurturing the future talents of the four-time Polish champion football club. Our brand will also be present on the LED bands during the matches of the first team, on the advertising bands in the training center, in TV spots and on the social media of the Club and the Academy.

Stijn De Jaeghere aerobatics

Safety Jogger is not only visible on the ground, but also in the air! We've known Stijn De Jaeghere for years and find the story behind his aerobatics and the dedication he has shown admirable. That's why we are delighted to support him in his flight to the top!

Alcatraz

Alcatraz Metal & Hard Rock Festival is an amazing international metal gathering in Kortrijk, Belgium, that takes place for 3 days and attracts over 35.000 visitors each edition. Safety Jogger supports Alcatraz by offering safety footwear and workwear for every volunteer or worker involved. In return, we're able to promote our rock-solid brand to a community in which we are very active.

SUPPORTING EACH MEMBER OF THE TEAM

Did you know that we are an official partner of both the Soudal Quick-Step men's cycling team and the AG Insurance - Soudal Quick-Step women's cycling team? We are proud to partner up with the most successful and therefore most visible UCI cycling team in the world and to have our logo prominently displayed on the athlete's shoulders. In addition, we also support each member of the team, including all riders and staff members, with our professional and medical footwear and apparel.

Dealer support

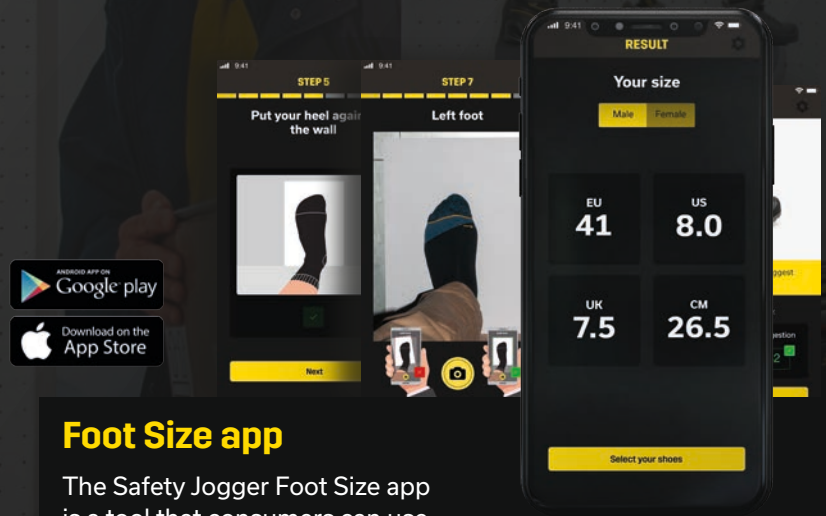

Digital showroom

Can't make it to our showrooms? Walk through them virtually! Our digital showroom is an interactive and unique experience that introduces you to our complete range of products in a 100% online environment.

Safety Jogger Academy

The Safety Jogger Academy is our own e-learning platform with a series of training videos to educate anyone who sells Safety Jogger products. Brought to you in a fun, clear and engaging way. Level up your technical and product knowledge and sell more!

Foot Size app

The Safety Jogger Foot Size app is a tool that consumers can use to select their correct shoe size, which will avoid returns and administration and which will provide dealers with more insights into their customer base. The app can be customized to show the colors and logos of your business. Download it from the App Store or Google Play Store.

SIS

Have you already seen our shop-in-shop concept? This designated Safety Jogger sales area offers the right balance between our brand experience, density and aesthetics. It reflects our categories, but at the same time, it also reflects the flexibility that is at the heart of any retail environment.

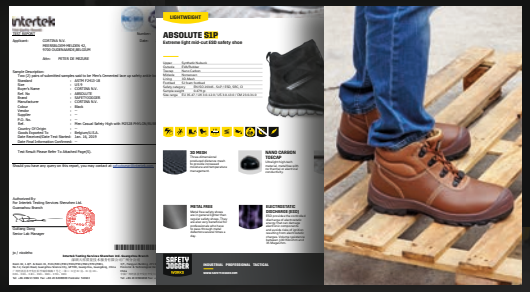

Dealer content

Through our dealer platform - order.safetyjogger.com – you'll have access to several useful tools to support your business, such as:

A personal advertising creator

A free advertising tool to create your own advertisements and flyers in no time. Choose between an official promotion or make your own customized promotion.

A marketing section

With product & lifestyle images, videos, marketing tools, technical knowledge and all the content you need to maximize your sales

In-store branding

Did you know that we offer our dealers several free POS materials? We have merchandise available with a Safety Jogger or a Quick-Step Alpha Vinyl branding to make a visible impact in your store!

Merchandising

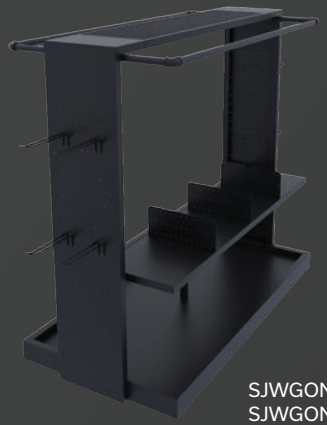

Did you know that we also support our dealers with an array of complimentary POS materials and merchandising items? Below, you can catch a glimpse of what's available, but we have much more in store for you. Don't hesitate to get in touch with your sales representative for a comprehensive overview of our offer!

A. CHEST
Measure horizontally across the widest part of the chest. Make sure the measuring tape is held straight across the back and do not pull the tape too tight.

B. WAIST
Men: measure horizontally at belly button height.
Women: measure horizontally across the narrowest part of the waist.

C. HIP
Measure horizontally across the widest part of the hips.

D. INSIDE LEG
Measure from the crotch to just below the ankle bone. Make sure the measuring tape is stretched.

E. TOTAL LENGTH
Measure the distance from the ground to the top of the head. Stand upright and do not wear shoes.
